

Compact hogger

The cost-effective machining solution in proven quality

Compact hogger

The new compact hogger offers reliable and solid performance in proven Leitz quality – running metre for running metre.

With tough market conditions and the need to be competitive, cost reduction plays an important role in furniture production. At the same time, the customer demands unconditional quality. With the new compact hogger, Leitz offers a cost efficient machining solution in tried and tested Leitz quality.

The new Leitz compact hogger offers drastically reduced purchase and service costs due to its specially designed cutting geometry. As usual, Leitz provides longevity, durability and quality without compromise. Running metre for running metre, it guarantees maximum cost-efficiency in production, especially when processing furniture parts with thin edges.

Thanks to its solid and robust design, even high mineral content material can be economically processed. With the potential capacity for 10-fold resharpening, production costs are noticeably reduced even further.

THE COST-EFFECTIVE MACHINING SOLUTION

COST LESS

Cost-efficient machining even under difficult operating conditions

- low purchase and service costs
- solid and robust construction with long tool life
- resharpen x 10

PROVEN QUALITY

Reliable machining performance in proven quality for every running metre processed

- cutting geometry adapted for the machining of furniture parts with a thin edge
- different tooth shapes especially for material with a loose middle layer or with high mineral content

Applications:

- Kitchen production
- Office furniture
- Residential furniture production
- Bathroom furniture

Different tooth shapes:

- Tooth with decreasing bevel for excellent cutting performance, particularly suitable for material with a loose middle layer
- Tooth with increasing bevel for maximum stability, particularly suitable for material with high mineral content

Leitz is your competent partner

Leitz offers partnership, market leading tool knowledge and technology with 3 components for your success:

- Innovative tooling systems, resource saving plus enhanced quality for better production
- Bespoke, modular or comprehensive Tool Management for enhanced efficiency
- Excellent service, reliable, near to customers all around the world
